

# THE ASTROPHYSICAL JOURNAL LETTERS

## CONTENTS OF VOLUME 412, PART 2

1993 JULY 20, Number 1

|                                                                                                                                                                             | Page | Fiche             |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------------------|
| A COMPARISON OF THE COSMIC MICROWAVE AND COSMIC X-RAY BACKGROUNDS: CONSTRAINTS ON LOCAL SOURCES OF THE FLUCTUATIONS OBSERVED BY COBE<br><i>S. P. Boughn &amp; K. Jahoda</i> | L1   | 148-A9            |
| SELF-ORDERING PHYSICS IN AN OPEN UNIVERSE<br><i>David N. Spergel</i>                                                                                                        | L5   | 148-B1            |
| SKEWNESS INDUCED BY GRAVITY<br><i>R. Juszkiewicz, F. R. Bouchet, &amp; S. Colombi</i>                                                                                       | L9   | 148-B6            |
| SPATIAL DISTRIBUTION OF SPIRAL GALAXIES IN THE VIRGO CLUSTER FROM THE TULLY-FISHER RELATION<br><i>M. Fukugita, S. Okamura, &amp; N. Yasuda</i>                              | L13  | 148-B11           |
| BOUNCING CLOUDS: A MODEL FOR THE QUASAR BROAD-LINE REGION<br><i>William G. Mathews</i>                                                                                      | L17  | 148-C1            |
| CO EMISSION FROM THE $z = 2.14$ DAMPED LYMAN-ALPHA SYSTEM TOWARD 0528-250<br><i>Robert L. Brown &amp; P. A. Vanden Bout</i>                                                 | L21  | 148-C6            |
| THE MASS DISTRIBUTION IN A MERGER MODEL<br><i>Nir J. Shaviv &amp; Giora Shaviv</i>                                                                                          | L25  | 148-C11           |
| A ROSAT UPPER LIMIT ON X-RAY EMISSION FROM SN 1992A<br><i>Eric M. Schlegel &amp; Robert Petre</i>                                                                           | L29  | 148-D1            |
| PSR B1620-26: A BINARY RADIO PULSAR WITH A PLANETARY COMPANION?<br><i>S. E. Thorsett, Z. Arzoumanian, &amp; J. H. Taylor</i>                                                | L33  | 148-D6            |
| DISCOVERY OF TWO FAST-ROTATING PULSARS<br><i>F. Camilo, D. J. Nice, &amp; J. H. Taylor</i>                                                                                  | L37  | 148-D11           |
| MASS TRANSFER RATE AND OUTBURST CYCLE OF SS CYGNI<br><i>Alexander Hempelmann &amp; Jürgen Kurths</i>                                                                        | L41  | 148-E1            |
| SUBARCSECOND IMAGES OF CW TAURI: CONSTRAINTS ON DISK SIZE AND JET FORMATION<br><i>Ana I. Gómez de Castro</i>                                                                | L43  | 148-E5            |
| INSTRUCTIONS TO AUTHORS OF LETTERS, RECENT LETTERS ABSTRACTS, AUTHOR AND SUBJECT INDEXES                                                                                    |      | Inside Back Cover |

1993 AUGUST 1, Number 2

|                                                                                                                                                                                                                                                              | Page | Fiche   |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|---------|
| COSMIC BACKGROUND RADIATION ANISOTROPY AT DEGREE ANGULAR SCALES: FURTHER RESULTS FROM THE SOUTH POLE<br><i>Jeffrey Schuster, Todd Gaier, Joshua Gunderson, Peter Meinhold, Timothy Koch, Michael Seiffert, Carlos Alexandre Wuensche, &amp; Philip Lubin</i> | L47  | 155-B3  |
| STREAMING MOTIONS IN THE LOCAL UNIVERSE: EVIDENCE FOR LARGE-SCALE, LOW-AMPLITUDE DENSITY FLUCTUATIONS<br><i>Stéphane Courteau, S. M. Faber, Alan Dressler, &amp; Jeffrey A. Willick</i>                                                                      | L51  | 155-B10 |

|                                                                                                                                                                                                                                                                                                                                                           | Page | Fiche             |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-------------------|
| SELECTION, COVARIANCE, AND MALMQUIST BIAS<br><i>Andrew Gould</i>                                                                                                                                                                                                                                                                                          | L55  | 155-C3            |
| NEUTRAL HYDROGEN 21 CENTIMETER ABSORPTION AT $z = 0.6847$ TOWARD THE "SMALLEST EINSTEIN RING"<br><i>C. L. Carilli, M. P. Rupen, &amp; Brian Yanny</i>                                                                                                                                                                                                     | L59  | 155-C10           |
| THE DISCOVERY OF TWO FU ORIONIS OBJECTS IN L1641<br><i>Karen M. Strom &amp; Stephen E. Strom</i>                                                                                                                                                                                                                                                          | L63  | 155-D1            |
| SUBMILLIMETER CO OBSERVATIONS OF WARM GAS AROUND T TAURI STARS<br><i>K. F. Schuster, A. I. Harris, Nels Anderson, &amp; A. P. G. Russell</i>                                                                                                                                                                                                              | L67  | 155-D7            |
| INFRARED CO EMISSION FROM YOUNG STARS: HIGH-RESOLUTION SPECTROSCOPY<br><i>C. J. Chandler, J. E. Carlstrom, N. Z. Scoville, W. R. F. Dent, &amp; T. R. Geballe</i>                                                                                                                                                                                         | L71  | 155-D13           |
| ERRATUM                                                                                                                                                                                                                                                                                                                                                   |      |                   |
| EFFECTS OF MAGNETIC FIELDS AND ROTATION ON THE FRAGMENTATION OF FILAMENTARY MOLECULAR CLOUDS:<br>COMPARISON OF THE THEORY WITH THE ORION A CLOUD<br><i>Tomoyuki Hanawa, Fumitaka Nakamura, Tomoaki Matsumoto, Takenori Nakano, Ken'ichi Tatematsu, Tomofumi Umemoto, Osamu Kameya, Naomi Hirano, Tetsuo Hasegawa, Norio Faiju, &amp; Satoshi Yamamoto</i> | L75  | 155-E6            |
| INSTRUCTIONS TO AUTHORS OF LETTERS, RECENT LETTERS ABSTRACTS, AUTHOR AND SUBJECT INDEXES                                                                                                                                                                                                                                                                  |      | Inside Back Cover |
